Summary

Two badly deteriorated storefront structures, the last remaining buildings of this type on the west side of Pearl Street, are located at 234-236 Pearl Street just west of Lexington Market. They are each brick buildings, three stories high and two bays wide. They feature first floor wood storefronts and are capped with decorative cornices. The storefront at 236 Pearl Street is partially boarded over, while the storefront on the adjoining structure is damaged, but fully exposed and is surmounted by a decorative iron railing. This building at 234 Pearl Street is "L"-shaped and wraps around the other building. The interior of the structure features a front commercial space with late nineteenth century shelving and counters, an intact stairway with decorative spindels, newel posts and curved hand rail, and a candy manufacturing facility in the rear. The interior of 236 Pearl Street features plaster walls, wood floors and a tin ceiling.

General Description

The southern building of this group, 234 Pearl Street, is a three story high brick building which is two bays wide and features a wooden storefront. The storefront features a central wood panel and glass double door entrance flanked by two projecting show windows. Wood panels are located below the show windows. A simple wood cornice is capped by an intricate iron railing. The upper floor windows were apparently two over two with wood sills and splayed brick flat arches. The building is capped by a bracketed wood cornice which features beading and jig saw wood work.

The front facade of 236 Pearl Street features a boarded over storefront that is capped by a simple wood cornice with consoles. The upper floor windows feature wood sills and lintels. The third floor window is six over six, but the second floor window is boarded over. The building is capped by a wood cornice with end brackets and decorative consoles. The side elevation of the building is of plain common bond brick with a bricked over side opening.

The side elevation of 234 Pearl Street has been stuccoed. A rear back building has a small curve at the stair and continues to wrap around the rear of 236 Pearl Street. The rear building elevations are made of common bond brick with an irregular arrangement of window openings.

The interior of the storefront at 234 Pearl Street features wood shelving along the walls supported by narrow spindels. The wood counter which is decorated by panels and brackets divides the space from a

Baltimore (City), Maryland
Description Continued Page 1

partitioned office in the rear. Other interior details include wood wainscotting, wood panel doors, wood strip flooring and a panelled office partition. Beyond the front retail space is an ornate stairway to upper floors and a manufacturing facility for confectionaries. The stairway features wood newel posts, spindels and a curved hand rail. The stair has many landings because of the difference in levels between the front and back buildings.

In the rear of 234 Pearl Street is a room which apparently was used for the manufacturing of candy. The room contains large metal vats and long table with metal tops. A single, iron fluted column supports the ceiling. The wood floors and plaster walls are in a deteriorated condition. The candy making facility wraps around the rear of 236 Pearl Street. The upper floors of 234 Pearl Street. The second and third floors are made up of two front rooms with wood floors, wood panelled doors, corner block molding at door and window frames and plaster ceilings and walls. A single back room adjoins the stairway. The interior of the storefront at 236 Pearl Street features a tin ceiling, plaster walls, wood wainscotting and wood panel doors. There has been fire damage and the upper floors were not accessible.

Prepare both a summary paragraph of significance and a general statement of history and support.

Summary

There are only two nineteenth century structures left standing on the west side of the 200 block of Pearl Street. The building are typical late nineteenth century commercial buildings. The building at 234 Pearl Street retains some notable interior and exterior architectural features. This building was used as a candy manufacturing establishment for nearly a century.

History and Support

The two buildings at 234 and 236 Pearl Street were apparently built c. 1875. The Sachse Bird's Eye View of 1869 shows gable roof buildings at the site. These structures were either added to or replaced by the present buildings. The structures are typical of storefronts of the era. The detailing on 234 Pearl Street is more ornate than the adjoining structure. The storefront retains most of its wood paneling, doors and window configuration. An excellent example of an iron balcony rests above the storefront cornice. The cornice to the building has original brackets and jig saw woodwork. The interior retains several excellent architectural features such as original store shelving, the excellent stairway and rear candy making facility. The architectural character of 236 Pearl Street is in a much more deteriorated state. The storefront is partially covered and obscured by wood boards and asphalt shingles. The only notable interior feature is the tin ceiling and parts of it are in bad condition.

Both of the buildings were owned around the turn of the century by John Ortmueller, a local candy manufacturer. The candy making establishment operated from 234 Pearl Street from 1881 to the 1960s, according to Baltimore City Directories. A sign within the structure, however, states that the firm was established in 1866. After Ortmueller's death in the 1920s, the business was operated by J. D. Hammerbacher, although the candy was manufactured under the name Ortmueller. The candy was sold at Lexington Market for most of the twentieth century. Besides information found at Land Records and Baltimore City Directories, there is little information about the company.
